APPENDIX B4

The Casio fx-260 Solar Calculator Guide

The GED Tests have been designed to reflect what graduating seniors know and can do. The use of the scientific calculator is common in most high school level math courses. The GED 2002 Mathematics Test allows the use of the Casio fx-260 Solar calculator for Part I of the test. Keys and basic functions found on the Casio fx-260 Solar calculator are identified to help you become familiar with the instrument.

- A – Display panel—“DEG” should appear at the top-center of the screen
- B – Clear and All Clear keys are shown in red
- C – Basic operation keys for addition, subtraction, multiplication, division, and equal
- D – EXP—Displays the most commonly used number for pi—3.141592654
- E – Decimal point
- F – Number or digit keys
- G – Four keys to remember:
 - +/- changes a positive number to a negative
 - \rightarrow backspace key
 - ([open parentheses
 -)] close parentheses
- H – $\frac{\square}{\square}$ - Fraction key
- I – Two keys to remember:
 - $\square \square$ —use in combination with another key
 - \square^2 —squares a number or with the shift key calculates square root

Our library is the biggest of these that have literally hundreds of thousands of different products represented. I get my most wanted eBook Many thanks If there is a survey it only takes 5 minutes, try any survey which works for you. Please check the new features updates for information about recent changes., Also, keep in mind that it may have bugs. Always doublecheck your results. If you do find any problems, please help me fix them by reporting the details of the problem using the feedback link at the bottom of the calculator page. Based on the feedback I received for the first version it now includes many additional features. The most important change is the history display. All operations that you perform during the session are saved and displayed on the top portion of the calculator, so that you can look back at the previous steps you made. You can go back to previous expressions to make corrections and all following expressions are updated automatically. The number of operations that are saved is only limited by the amount of memory of your computer. The direct text input feature enables you to enter the expression directly in the input field the bluebordered field above the keyboard. You never need to use the mouse to click on the keys. You may still use the mouse if you want to, but typing directly is probably much quicker and more comfortable for long sessions. You can define your own functions. The new functions that you create can be included in any expression, or in other functions. You will need a recent version of Flash Media Player. The program is rather large, so you will probably need a broadband internet connection. After you use it the first time, it should be cached by your browser and it will load much quicker. From the calculator page shiftclick on the help link at top of the page to display this help document on a new window. When you have finished typing your expression, press Enter to evaluate it.

If the expression is syntactically correct, it gets processed and displayed on the history window, along with the result. When the rational result is the same as the approximate result, only the rational result is displayed. Likewise, if a rational result is not available, the calculator will only show the approximate result. When there is more space available in the visible area, a scroll bar is displayed on the right side of the calculator. You move the scroll bar by leftclicking on it and moving your mouse up or down while holding down the left button. Retrieving previous expressions By using the Up and Downarrow keys you can browse through the history of all the expressions you entered, modify them and recalculate the results as new expressions. This can be handy if you realized you have made a mistake and want to recalculate the result without retyping the whole expression. Note

that modifying an expression this way does not replace the previous expression but creates a new expression that is added to the bottom of the history. The first number in each line, underlined, is the sequential number of each expression. You can use this number as parameter to the ans function to retrieve the result of the corresponding expression. You can also use your mouse to quickly retrieve an answer by clicking on the underlined sequence number of the expression. This will enter the ans function for you in the expression input field. Suppose you have entered many expressions, all part of the same problem, when you realize that you mistyped a number in the first expression. Normally you would have to start from scratch and redo all your calculations. With this calculator you can change an expression that you previously entered. Here is how to do it The recalculations are performed recursively. After you have entered the diameter and the expressions to calculate radius, area and circumference, you realize that instead of entering 15 for the diameter, you accidentally entered 25.

<http://atlantichomeportugal.com/wp-content/plugins/formcraft/file-upload/server/content/files/162740b1394e2b---broker-loan-manual-mortgage-officer.pdf>

You leftclick on the wrong expression, in this case the number 25 You can now modify the value, change it to 15, then press Enter When you attempt to perform a reset, a confirmation window appears. Click on ok to complete the reset or on cancel to abort the operation. When you reset the calculator all expressions in the expression history are deleted. There is no way to retrieve the expression history after a reset. Note that a reset of the calculator does not delete user functions, even if they were entered through the calculator being reset see Defining User Functions below. When using the keyboard, remember that the online scientific calculator is a formula calculator versus an immediate execution calculator . This means that you enter your expressions as you would write them on a piece of paper. As an example, imagine you want to calculate the cosine of pi on a traditional pocket calculator You would press the pi button first, followed by the cosine key. It doesnt work this way on this calculator. This method of input allows you to use parenthesis to specify the order of operations. For more information on formula calculator and calculator input modes, see this wikipedia article Calculator input methods. You can define a named function to use in your expressions. Decide the names of the function and its parameters. User functions can have any name, even names of existing builtin functions. Short, one letter names are quicker to use; Long explanatory names make expressions more readable. If you use a builtin function name for one of your functions you are effectively replacing the builtin function with a new one. The parameters of the function can be any one letter. Note however that if you use e as parameter to the function you will not be able to use the e constant Eulers constant in your function. e will still be a valid constant in your expressions. The new function is now in the calculators memory and can be used in expressions.

www.demirdokumservisiankara.com/image/files/canon-pc-720-manual.pdf

However, if the function is already in use, you will get an error if you attempt to change the number of parameters. When you replace a function, all expressions that use that function and all expressions that use a function that is dependent on the one you replaced, are updated automatically. To delete a custom function press the delete button next to the function that you want to delete. The button is graded out if deletion is not possible. Once you have used a custom function in an expression you will not be able to delete it until you reset the calculator see Calculator Reset above. For non integer numbers, the factorial is calculated using the Stirling formula. Ask your question here. Provide a clear and comprehensive description of the issue and your question. The more detail you provide for your issue and question, the easier it will be for other Casio FX991EX owners to properly answer your question. Ask a question Please helpThis manual comes under the category Calculators and has been rated by 5 people with an average of a 5.9. This manual is available in the following languages English. Do you have a question about the Casio FX991EX or do

you need help. Ask your question here Casio FX991EX specifications Brand Is the device still safe to use Remove the battery with gloves and clean the battery compartment with a toothbrush and vinegar. After drying, new batteries can be inserted into the device. ManualSearcher.com ensures that you will find the manual you are looking for in no time.
