The owner of the brand is KCD IP, LLC, an entity of Sears Holdings. Barrows' idea was to find an impressive brand name that would have stood out Sears among other manufacturers. That was a good area for Craftsman to start successfully in the years of difficult economic situation in the USA in the 1930s. Tom Dunlap, a successor of Barrows as a head of hardware department, decided to create a line of tools that would satisfy the demands of the automotive industry as America was transitioning to the era of automobiles. He upgraded the quality of tools and first of all he abandoned the old, clumsy cast iron hammers and wrenches as well as soft screwdrivers which he thought to be holdovers of the past. Dunlap applied chrome plating to the tools with the aim to make them more attractive, with good finish and color. In addition he added high impact plastic handles on screwdrivers. Some people were skeptical of the innovations, but it worked, and in a year Sears' sales of tools rose sixfold. In order to distinguish Craftsman items from the manufacturer's own products or from other brands which the manufacturer makes, Craftsman brand products may be produced with super characteristics and purposes. Sometimes Craftsman products and products of other brands are made identical, the only difference is a brand name on them. Starting from 2010 Craftsman hand tools such as wrenches, ratchets and sockets having been manufactured by Apex Tool Group in China and Taiwan; but Western Forge produces screwdrivers, adjustable wrenches, pliers and larger mechanic tool sets in the United

States.<http://www.hotelsinkumbakonam.com/userfiles/ford-bf-owner-s-manual.xml>

Part. No. 183172540001 Rev. 0 07/21/03

Metal Belt Buckle Rubber Overmold Handle To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Took only two hits with a 4lb hammer to loosen the door lock screws. L means the tool will turn left when hit, though it is on the right side and R means it will turn right and it is on the left side. I was trying to free a stuck rotor screw, but the bit shattered after just a few hammer blows. Not what I would have expected from Craftsman. They have two Phillips head screws that keep them mounted it positive. Most likely for factory installation reasons. I live up north so there is a lot of salt on the road come winter time. These screws were so rusted and so seized I would of never ever been able to get them out with a regular screw driver. Most likely would of had to drill them out. I used the impact driver with such ease. Turned it the way I needed to go and gave the back a tap with a hammer. It did the trick. So very happy. I'm old school so I see a difference in the new ones over my old junk. I had three slotted screws to remove from a 57 L6 which may have had thread lock on them. One shot usually before you start tearing up the head. Used heat and one hard hit on each. They all came loose cleanly. Couldn't even budge them with a big screwdriver. If I don't ever use it again it was worth it on this old timer. I'm sure I will though. It has to be since you hit it with a hammer a lot. They are supplied so that is good. I couldnt find a reasonable extension for it though, and since the head of the chuck is a bit large, it will be a bit more cumbersome in tight spaces. For example I tried to use it on a stubborn rifle butt stock screw, recessed in the stock. Probably some out there, I just couldnt find anything at 3 hardware stores.

I had to replace the fuel pump in my truck and the screws were rusted solid. I couldn't use my torch and decided to go with this. I had to hacksaw a ridge in some of the screws and used Valve Grinding Compound for enough grip. Great impact screwdriver. Hard to believe, but just beat the you know what out of it and it will loosen old and rusted bolts or nuts. But dont be gentle. It take a few really good whacks, and I mean good ones. We wound up using a light sledge, not a normal hammer. But it does work. No more stripping out stubborn screws in car rotors. That's the key, if all else fails drill it

out, but you shouldn't have to. This tool works great. Highly recommend tool Sorry, we failed to record your vote. Please try again. The Craftsman trademark was registered by Sears on May 20, 1927. A variety of companies manufactured tools for Sears under the Craftsman name. The known makers of woodworking machines, metalworking machines, engines, motors and vises are listed below. Companion tools were less expensive than the contemporaneous Craftsman tools. It was replaced by the Dunlap name in 1941. Interestingly, in 1998 Sears applied for a trademark on the Companion name, for use in on a vast list of products. Some older Dunlap machines were still good quality, and remain very good values. Here is a list of known North American based makers of their machinery with their model number prefixes some companies do not have a model number prefix because they manufactured for Sears before they introduced the prefix system Of course, Sears sells an enormous variety of products that are outside the scope of this site. We solely cover woodworking and metalworking machinery plus the engines and motors that powered them, and of those we only cover products made in USA, Canada and the UK. Sears also used the Companion, Dunlap, and Fulton names. In Canada, the Craftsman name was also used by SimpsonsSears Ltd. The store sold them to Richard W.

Sears, a local telegraph operator, who sold them to railway workers for a profit. Sears realized that there was a good market for this service, and started the R. W. Sears Watch Co. He relocated to Chicago in 1887, and found a partner, watch repairman, Alvah C. Roebuck. In 1893 the company was renamed to Sears, Roebuck and Co. Sears, Roebuck expanded rapidly in the 1890s because of their catalog sales, especially to farmers. In 1925 they opened their first retail store. By 1933 they had 400 stores. In 1927, Sears hired Arthur Barrows to head the companys Hardware Department. Barrows knew hardware and wanted to create a brand name for Sears hardware that distinguished it from other manufacturers. Dunlap immediately upgraded the quality of the tools. He threw out all the big, clumsy, cheap, cast iron hammers and wrenches, and the soft screwdrivers that were hangovers from the days when farmers were the companys biggest customers. Dunlap recognized that America had moved into the automobile age and that Sears needed a line of high quality tools to meet this new demand. He decided to improve the look of Craftsman tools by adding chrome plate to

improve the finish, color, and trim on wrenches and sockets, and high impact plastic handles on screwdrivers. Still, it may take some effort to track down what you are looking for, and if your machine is especially old preWWII or obscure then you may be unsuccessful. The list below contains suggestions on where to look. Just put in your model number into the search box and search. Call the Sears Parts Line, 18004694663, and have your model number ready. This is completely free, including shipping. Earlier Sears manufacturer lists incorrectly identified these makers. Brian Kachadurian was the one who nailed down both makers, based on a comparison of Searsbadged motors and grinders compared to products known to have been manufactured by Sunlight and Delco.

In the case of Sunlight, OWWM contributor Jeff Wilson provided a key piece of evidence in the form of a patent number on a Companion bench grinder that is identical to a later model with modelnumber prefix 115. SKF confirmed that an oddsized SKF bearing used in one of those 551 motors was made exclusively for Leland. Thanks to Brian Kachadurian for making this connection.
